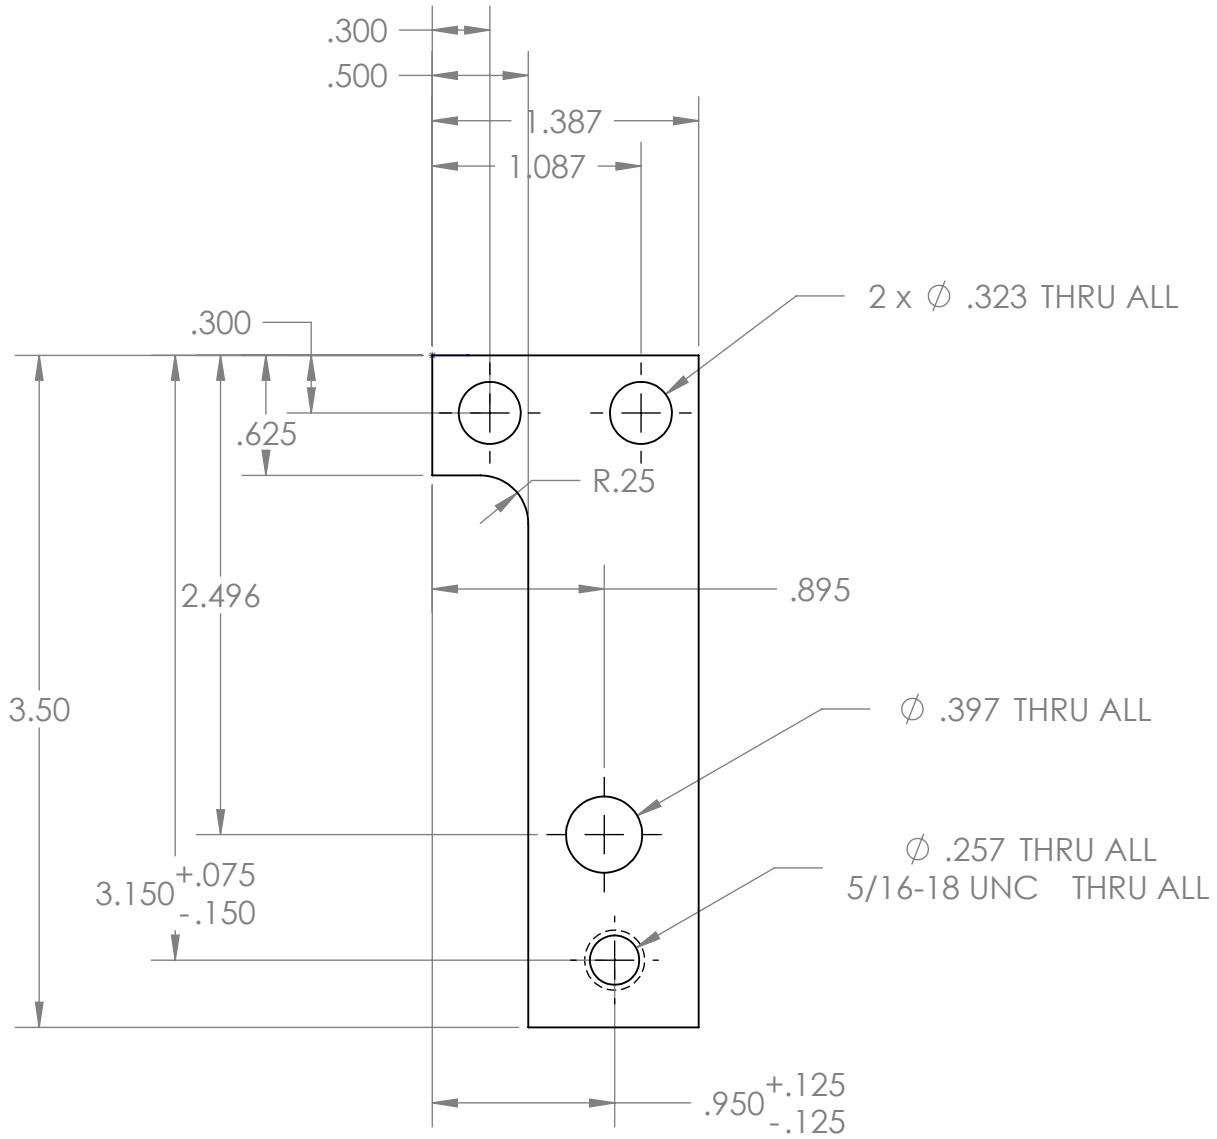
Short-Throw Shifter plate for 1st Generation Mazdaspeed3
Drawn by JamesCH for Mazdas247.com



Use 1/4" aluminum or steel, or 1/8" steel with a nut on the back of the ball stud.

This drawing can be taped directly to metal stock and a punch can be used to transfer important locations.

Feel Free to change the location of the threaded hole to adjust throw lengths and shifter position. Moving it up will lengthen the shifter throw, and moving it forward and backward will move neutral forward and backward.

Ball Studs are available from McMaster-Carr, PN 9512K73 or Catalog Page 1181

This drawing is to be used at the risk of the end user, it is neither certified nor guaranteed in any way, express or implied.
